Classic Tennessee stock, right:

Our classic Tennessee fullstock has a buttstock with a straight comb, unlike earlier stocks, a bit thicker than the very thin late Tennessee stocks. This stock will look great, when trimmed in iron.

Pre-inlet for our slim 13/16" octagon 42" barrel, large Siler flint or percussion lock, our #TR-DST-4 or 6 triggers, our #TG-SM-1-I triggerguard, a straight tang plug, and drilled for a 3/8" ramrod. The forend is pre-shaped, and the butt end has not been cut for the buttplate. You may omit the buttplate, when building a *poor-boy* rifle. Trigger reach may be adjusted up to 15", with 4-1/2" drop.

Classic Tennessee stock, pre-inlet, pre-shaped forend:

- #Stk-CTI-13-M1** stock, right, 13/16", plain maple **only \$162.50**
- #Stk-CTI-13-M3** stock, right, 13/16", curly maple **only \$232.50**
- #Stk-CTI-13-M4** stock, right, 13/16", fancy maple **only \$312.50**
- #Stk-CTI-13-W1** stock, right, 13/16", black walnut **only \$222.50**

Classic Tennessee stock, not inlet for lock:

This classic Tennessee fullstock is made without lock or trigger mortise, so you may hand inlet your favorite lock and trigger. Pre-inlet for any light 13/16" octagon 42" barrel, drilled for a 3/8" ramrod hole, it has a straight comb. Trigger reach may be adjusted up to 15", with 4-1/2" drop. Butt end is 5 x 1-1/2", not yet cut for buttplate.

Southern mountain rifles were sometimes made in *poor boy* style, omitting the buttplate, toeplate, forend cap and ramrod entry pipe. A simple patch grease hole was sometimes drilled in lieu of a patchbox.

Classic Tennessee stock, not inlet for lock or trigger:

- #Stk-CT-13-M1** stock, right, 13/16", plain maple **only \$115.00**
- #Stk-CT-13-M3** stock, right, 13/16", curly maple **only \$185.00**
- #Stk-CT-13-W1** stock, right, 13/16", black walnut **only \$175.00**

Drill bits for our gunsmith's taps:

- #Drill-29** #29 drill bit, .1360", tap drill for 8-32 **only \$1.99**
- #Drill-21** #21 drill bit, .1590", tap drill for 10-32 **only \$1.99**
- #Drill-13/64** 13/64" drill bit, .2031" clear for 10-32 **only \$1.99**

Gunsmith's Taps for vent liners and nipples:

- #Tap-1/4-28-P** 1/4-28 tap, plug, for vent liner or nipple **only \$3.99**
- #Tap-1/4-28-T** 1/4-28 tap, taper, for starting a hole **only \$3.99**
- #Tap-1/4-28-B** 1/4-28 tap, bottom, to finish blind hole **only \$3.99**

Triggerguards from our Southern Mountains:

We should probably describe the all longrifles from Tennessee, the Carolinas, and the Virginias, as "Southern Mountain" longrifles.

Triggerguard, wax cast iron or brass.....#TG-SM-1-(I or B)

This style of Southern Mountain triggerguard is often decorated with an engraved 'V' pattern at the rear junction of the grip rail and bow. The triggerguard is shaped with a long tapered rear finial and curl at the end of the grip rail, common features with those found in Tennessee, the Carolinas, and the Virginias. The triggerguard has a overall length of 10-3/4". The bow is large enough for a double set trigger, the popular #TR-DST-4 or #TR-DST-6, by R. E. Davis works well.

- #TG-SM-1-I** triggerguard, wax cast, steel **only \$29.99**
- #TG-SM-1-B** triggerguard, wax cast, brass **only \$22.99**

Triggerguard, wax cast iron.....#TG-TN-2-I

Patterned after an original, from a longrifle by Bean of Tennessee, this triggerguard has a long bow to accept double set triggers. Fine locks, set triggers, and figured wood are frequently found on Tennessee rifles, even though the iron furniture may be primitive, hand forged, or abbreviated by omitting the buttplate and entry pipe.

- #TG-TN-2-I** triggerguard, wax cast, steel **only \$25.99**

Tennessee sideplate inlays.....#SP-TN-1, 2 or 3

Tennessee rifles date from the late flint period. Often trimmed in iron, sometimes in brass, these rifles usually feature fine imported locks, double set triggers and figured curly maple stocks. Many have primitive hand forged furniture and long tangs. Poor boy style rifles may omit the buttplate, entry pipe and muzzle cap.

Select one of our single screw sideplate inlays, and inlet it flush with the surface of the side lock panel. Each sideplate inlay is counterbored for the 3/8" head of our 8-32 or 10-32 lock bolt. When using two lock bolts, select a similar Hawken sideplate inlay, with a simple finial (or file off the finial, until round), for the front lock bolt.

- #SP-TN-1-I** sideplate, .125" thick, die cut, iron **only \$5.99**
- #SP-TN-1-B** sideplate, .125" thick, die cut, brass **only \$6.99**
- #SP-TN-2-I** sideplate, .125" thick, die cut, iron **only \$5.99**
- #SP-TN-2-B** sideplate, .125" thick, die cut, brass **only \$6.99**
- #SP-TN-3-I** sideplate, .125" thick, die cut, iron **only \$5.99**
- #SP-TN-3-B** sideplate, .125" thick, die cut, brass **only \$6.99**
- #Bolt-L-8-F** lock bolt, 3/8" head, 8-32 thread **only \$1.59**
- #Bolt-L-10-F** lock bolt, 3/8" head, 10-32 thread **only \$1.59**

Taps for 8-32 bolts use #29 tap drill, #16 clearance drill.

- #Tap-8-32-T** 8-32 tap, taper, for through hole **only \$3.99**
- #Tap-8-32-P** 8-32 tap, plug, to start a blind hole **only \$3.99**
- #Tap-8-32-B** 8-32 tap, bottom, to finish a blind hole **only \$3.99**

Taps for 10-32 bolts use #21 tap drill, 13/64" clearance drill.

- #Tap-10-32-T** 10-32 tap, taper, for through hole **only \$3.99**
- #Tap-10-32-P** 10-32 tap, plug, to start a blind hole **only \$3.99**
- #Tap-10-32-B** 10-32 tap, bottom, to finish a blind hole **only \$3.99**
