Long adjustable rear sight..... #RS-LA

Attractive wax cast steel rear sight, adjustable for elevation using the center screw. The standard 3/8" dovetail base is covered by the sight. Enlarge the square slot if needed, using our needle files.

#RS-LA long adjustable rear sight **only \$10.99**

L&R's adjustable five step Hawken rear sight kit.....#RS-HA-5

Known as a Rocky Mountain Rear Sight, this long adjustable sight has a .370" x .085" dovetail spaced 3" ahead of the normal location.

A great choice for use on your halfstock Hawken rifle, it works well on 15/16", 1", or 1-1/8" octagon barrels.

Not a fixed iron sight, it does not meet N.M.L.R.A. Hawken match rules, but it may be used in "adjustable sight" matches. Best quality alloy steel wax castings, made in the U.S.A. by L&R. Machined and deburred, these sight parts are ready for installation and use, without file fitting. The step bar has five elevation levels.

Abrasive blasted to a grey matte finish, this sight is ready for browning, or polish it bright and blue it.

#RS-HA-5 adjustable rear sight, five step **only \$34.99**

#RS-HA-5-Ramp spare five step sight ramp **only \$ 8.99**

Gun Maker's Tip:

An integral skirt covers the dovetail base, concealing the barrel's sight slot. The tempered spring steel body has a slight arc to hold the five step elevation bar snug, at your choice of sight position.

All dovetail mounted rear sights require additional gunsmithing after installation. They never align perfectly with the barrel until "bumped" into alignment. It works!

Carlos Gove "Chunk Gun" Adjustable Rear Sight..... #RS-3A

Modeled after an antique rear sight on a heavy barrel percussion target rifle by famous American gun maker Carlos Gove, this sight is sometimes called a "chunk gun sight" since heavy percussion rifles were often shot from prone position with the forend resting on log or "chunk". Use this sight on a late fullstock or heavy barrel halfstock Plains rifle with a 1" or 1-1/8" octagon or heavier barrel.

Easily installed, no tempering is required. Simply file and polish these castings, drill and tap a pivot hole in the barrel, cut a dovetail notch, slide and screw this primitive adjustable rear sight into position. In actual use, the dovetail bar is positioned 3/8" behind the rear sight, exactly 4-1/4" from the pivot screw hole.

#RS-3A Carlos Gove "chunk gun" sight **only \$32.99**

Gove "Chunk Gun" Rear Sight
Sight base, step bar, dovetail, screw,
and illustrated instruction sheet
#RS-3A kit \$32.99

Carlos Gove Adjustable "Step Bar" Rear Sight:

This nice wax cast steel rear sight kit consists of five (5) pieces: a 5-1/4" long sight body, elevation ratchet step bar, windage dovetail saddle, pivot anchor screw, and illustrated instruction sheet.

Carlos Gove "Chunk Gun" Rear Sight

Gunsmith's Dovetail Forming Tool..... #Tool-Dovetail

Use our dovetail forming chisel to "persuade" the slot to accept your lug or sight. It raises the metal, rather than removing it. Underlug slots may be half deep, half raised. Or use it to form a raised moulding for your rear sight. Very shallow dovetails in round barrels may be stronger than solder.

#Tool-Dovetail Dovetail forming tool **only \$12.99**

Forming a raised dovetail for a rear sight.
